

### **What is Clear Care?**

Your one bottle solution for cleaning and disinfecting. Experience the feeling of fresh, clean, more comfortable lenses- guaranteed. For a healthy choice, try Clear Care One Bottle Solution for Cleaning and Disinfecting.

With the exceptional cleaning action of hydrogen peroxide, Clear Care cleans and disinfects lenses like no multi-purpose solution can.

**You can actually see it working!** Clear Care, with its triple-action power, bubbles to actively clean and remove protein from your lenses, while killing germs and bacteria which can cause eye infections.

Clear Care can be used with ALL types of Soft Contact Lenses. Clear Care works great for all types of contact lenses and is ideal for silicone hydro gel lenses.

### **How do I use Clear Care?**

It's easy to make the switch from a multi-purpose solution to Clear Care.

Just remember that Clear Care is different from a multi-purpose solution, so you need to use it a little differently.

Never use with a flat lens case. Clear Care only works with the special lens case provided.

Be sure to keep your contacts in the lens case for at least six hours. This allows the bubbling action of Clear Care to clean and disinfect your lenses thoroughly. During the six-hour soak, the solution is neutralized, making it safe for you to insert your lenses. **If you don't wait, and insert your lenses too early, you'll feel burning and stinging!**

Just follow 3 easy steps!

Just some tips...

-Never use with a flat lens case. Clear Care only works with the special lens case provided.

- Never remove lenses from case until at least 6 hours later. The solution needs time to neutralize.

-Never rinse lenses prior to inserting lenses into your eyes. If you want to rinse lenses, use a sterile saline solution.

-Never squirt Clear Care directly into your eyes.
